

CASE STUDY

Archer House

Location: 14-22 Castle Gate, Nottingham, NG1 7AW

Industry

Residential

Background

JNR was tasked with completing fire stopping penetration sealing works at Archer House in Nottingham.

Planning

A risk assessment and method statement was put into place before any work was carried out; a SSSTS supervisor was stationed on site in order to oversee operatives. A fire protection system was planned and put into place with the main client (Pride Air Conditioning). A system was also put into place to ensure all materials were stored correctly and any waste or unwanted materials were correctly disposed of. All working operatives were DBS checked before any work was carried out as well as all operatives having a CSCS card and being FIRAS trained.

Objectives

- Discussion and effective communication with Client to Assess and plan implementation of materials and other required work.
- Preparation of site and distribution of materials across the site.
- Implementation of work.
- On going communication with work force and client to ensure all parties are aware of proceedings throughout the period of work.
- Closing down discussion with Client once work is completed.

Execution

- Identify key areas of work and client requirements.
- Establish required number of workforce and quantity of materials.
- Ensure all work is carried out according to regulation guidelines and company policies.
- All works penetration works labelled, photographed and documented for client.
- Overcome and rectify any potential barriers or problematic issues.
- Advise client once work is completed, convey any problems that may have arisen and discuss payment protocols.
